

Quonset huts and business prospects

Quonset huts are basically the semi cylindrical metallic structure which are very light in weight. The cross section of the surface is semi circular, which is basically a sheet of iron or other popular alloys of iron and are further coated with a layer of Zinc or Tin, as the case may be to add to the resistance towards getting corroded. This innovative product was first erected in a place called Quonset Point in Davisville, a village in Rhode Island. This explains the name of Quonset huts.

The first customers of this structure were interestingly the US Navy which was looking for a supple and adaptable building structure to cater their immediate needs to harbor safely their arms, soldiers and other supplies during the Second World War. The apparent utility of Quonset huts lied in the ability of easy transport from the place of manufacture to the place of erection and assembly at the preferred location, besides being light weight and versatile in use. To add on to the quality of hassle free assembly of a Quonset Hut it could be put to any use since it absolutely resisted any austerity of weather including rains, hail, snowfall etc. The commendably of these qualities of Quonset huts was soon appreciated by the general public and soon they were used to erect warehouses, stores, shops, garages and even hangars for aircrafts.

The added advantage of Quonset huts is that it is cheaper in price and can be easily built in factory and reassembled with equal ease. This differentiates Quonset huts substantially from other forms of buildings, storehouses. The metallic structures of Quonset huts are now a day being made to allow plantation of windows and partitions but not fully. However, this is not the case for all times to come for options are on a continuous rise. Manufacturers are genuinely trying to honor the needs of the clients who approach them with very specific problems, requiring equally specific solutions and thereby needing manufacturers to provide with varying design on a base framework of the Quonset huts.

People in the slowing down economies are looking for business ideas that have not been exploited by many. Quonset huts are one such area where there is a lot of scope of growth and development. There is a constant demand of Quonset huts given the wide applicability prospects which invites a lot of scope of innovation. In agriculture oriented economies, these are widely acclaimed since they can be easily erected in farms and put to various uses from protection of crops to harboring of grains etc. People have exploited this demand by acting as traders, suppliers, manufacturers, deal makers and agents for marketing of Quonset huts. It is emphasized that such splendid piece of engineering are always welcomed in the world of storehouses and people are willing to acquire them for they are simply the better form of storehouses with a wide range of uses to which they can be put.
